Hello to all of the glowbugs out there in hollow state land,

I am in the process of rebuilding several pieces of vintage ham radio gear including a Collins KWS 1, 75A4 and 32V1. I would like to rebuild the can type electrolytic capacitors to a higher voltage rating than is currently available. Therefore; I am seeking information (books, articles, references etc.) on how to rebuild or make electrolytic capacitors. I would appreciate any information anyone could provide to me on this topic.

Thank you all for your help.

Sincerely,

Bill Gittere K2LNU
